***Allowable Subject Matter***

1. Claims 1-7, 10-17, 19-21, and 23-24 are allowed.
2. The following is an examiner's statement of reason for allowance:

The present invention is directed to a method and system for performing priority-based flow control.

Claim 1 identifies an uniquely distinct feature "reconciling two separate application sessions requesting the use of the same reserved network address of the second type and the first port while at least the first port associated with one of the application sessions is not replaceable; and recognizing by the DPM server, data packets received for the two application sessions if both request the use of the first port, while neither of which is replaceable";

Claim 12 identifies an uniquely distinct feature "instructions for recognizing, by the DPM server, data packets received for two separate application sessions requesting the use of the same reserved network address and the first port while neither of which is replaceable by using the network address and port for the computer outside of the first network to distinguish each application session"; and

Claim 20 identifies an uniquely distinct feature "reconciling two separate application sessions requesting the use of the same reserved network address and the first port while at least the first port while at least the first port associated with one of the
